

App Name: ReFind

Full Name: ReFind – Smart Lost & Found Management System

Tagline: "Find It. Verify It. Get It Back."

GROUP DETAILS:-

1. ABHISHEK KUMAR SINGH
2. GYAN PRAKSH
3. GIRDHARI CHOBEHY
4. HIMASHU GUPTA

 Project ka basic concept

1:36

← Report Item

Lost

Found

Title :

Enter a short title (e.g. Lost student ...)

Descreption :

Describe the item (e.g. color, size, brand..)

Category :

Select a Category...

Location :

Select a Location...

Date :

30/11/2025

Home page and search

Reporting a lost item

Claiming a lost item

Problem:

College/campus mein kisi ka phone, ID card, wallet, bag, keys, documents etc. kho jaate hain. Usually WhatsApp groups, notice board ya security desk par manually search karna padta hai.

Hamare system ka solution:

Ek centralized platform jahan:

Lost Item → Report → Matching → Claim → Verification → Return

poora process digitally manage hoga.

Isme kya-kya use hoga?

Frontend

- **React.js** — modern web interface
- HTML/CSS/JavaScript
- Responsive design — mobile + laptop dono par chalega

Backend

- **Python + FastAPI**
- REST APIs
- Authentication & authorization

Database

- **PostgreSQL**
- Users
- Lost reports
- Found reports
- Claims
- Matches
- Notifications
- Admin data

Storage

Photos ke liye cloud/local object storage use kar sakte hain.

AI/Smart Matching

AI ka use description aur image/details ko compare karne mein kiya ja sakta hai.

Example:

Lost report:

Black Samsung phone, library ke paas lost.

Found report:

Black Samsung mobile found near library.

System:

👤 System mein kaun-kaun hoga?

1. Student/User

User:

- Account banayega
- Lost item report karega
- Found item report karega
- Items search karega
- Match dekhega
- Claim karega
- Notifications receive karega

2. Finder

Agar kisi ko item mila:

Found Item → Upload → Details → Submit

Example:

Found: Black Wallet

Location: Library

Date: 4 Sept

Description: Black leather wallet

Finder ko owner ki personal information directly nahi milegi.

3. Admin

Admin:

- Reports manage karega
- Claims verify karega
- Fake reports remove karega
- Users manage karega
- Items approve/reject karega
- Returned items mark karega
- Analytics dekhega

1. Lost Item Report

User details fill karega:

- Item name
- Category
- Photo
- Description
- Date
- Approximate time
- Location
- Identifying details

Example:

Item: AirPods

Location: College Library

Date: 3 Sept

Description: White case with small scratch

2. Found Item Report

Finder similar details submit karega.

System automatically check karega ki koi existing lost report match karti hai ya nahi.

3. 🔥 Smart Matching

Ye project ka **main USP** ho sakta hai.

Normal websites mein user ko manually hundreds of posts search karni padti hain.

Hamare system mein matching engine automatically check karega:

- Item category
- Item name
- Description
- Location
- Date
- Time
- Identifying characteristics
- Image similarity (agar AI vision add karein)

Then:

Potential Match Found

4. Search System

User search kar sakta hai:

Category

- Mobile
- Wallet
- ID Card
- Bag
- Documents
- Electronics
- Keys
- Other

Location

- Library
- Canteen
- Parking
- Classroom
- Hostel
- Ground

Date

Lost / Found

5. Claim System

Ye bahut important feature hai.

Suppose kisi ne **iPhone** found kiya.

Koi user claim karta hai:

“Ye mera phone hai.”

System simply phone user ko nahi dega.

Claimant se verification questions pooche ja sakte hain:

- Case ka color?
- Wallpaper kya tha?
- Lock-screen detail?
- Last 4 digits of serial/identifier, where appropriate?
- Special identifying mark?

Finder/admin verification ke baad claim approve hoga.

6. Privacy Protection

Ye system ko normal websites se better banayega.

Finder aur claimant ki personal information openly show nahi hogi.

Example:

✗ Phone number publicly display nahi hoga.

Instead:

Contact through platform

7. Notifications

User ko notification milegi:

 Possible match found for your lost item.

 Your claim is under verification.

 Your claim has been approved.

 Item marked as returned.

8. Admin Dashboard

Admin ko complete control milega.

Dashboard:

Total Users	1,250
Lost Items	340
Found Items	280
Successful Returns	190
Pending Claims	32
Flagged Reports	11

Charts bhi honge.

9. Item Status Tracking

Har report ka status:

LOST

POSSIBLE MATCH

FOUND

CLAIM SUBMITTED

VERIFIED

RETURNED

CLOSED

10. Fake/Suspicious Report Detection

Agar koi repeatedly fake reports submit karta hai:

System/admin us account ko flag kar sakta hai.

Example:

⚠ Suspicious activity detected

Admin manually review karega.

AI ka actual use kya hoga?

AI ko sirf naam ke liye nahi lagana chahiye.

AI Matching

Suppose:

Lost report:

“Blue water bottle with Avengers sticker, lost near classroom.”

Found report:

“Blue bottle having superhero sticker found outside Room 204.”

AI understand kar sakta hai ki descriptions semantically similar hain.

Result:

Match Score: 87%

Image Matching

Agar user lost item's photo upload karta hai aur found item ki photo available hai, system visual similarity bhi use kar sakta hai.

Example:

 Lost item photo

vs

 Found item photo

→ **Possible visual match**

Important: Image matching ko supporting signal rakhenge, final ownership proof nahi.

Complete workflow

Case 1 — Student loses phone

Student Login

Report Lost Item

Upload Photo + Details

System searches existing Found Items

AI/Matching Engine

Possible Match

Student submits Claim

Verification

Admin/Finder approval

Phone Returned

Status = CLOSED

Case 2 — Someone finds a wallet

Finder Login

Report Found Item

Upload Details

System searches Lost Reports

Possible Owner

Owner notified

Claim + Verification

Return

Existing apps/websites se difference

Yahan project interesting ho jata hai.

Feature	Normal Lost & Found Hamara System	
Lost report		
Found report		
Search		 Advanced
Filters	Basic	Advanced
Automatic matching	 /Limited	

Feature	Normal Lost & Found Hamara System	
AI description matching	✗	★
Image similarity	Usually limited	★
Claim verification	Basic	🔒
Privacy protection	Limited	✓
Notifications	Sometimes	✓
Admin dashboard	Basic/varies	Advanced
Analytics	Limited	✓
Fake report flagging	Limited	✓
Campus-specific	Not always	★
Return tracking	Basic	✓
Modular college integration	Usually no	★

🏠 Sabse important: College ke liye kaise useful hoga?

Isko **multi-campus ready** bana sakte hain.

College future mein apna data configure kar sake:

College Name

Departments

Buildings

Rooms

Hostels

Security Offices

Admin Users

Categories

College ko code change karne ki zarurat na pade.

🔧 College future mein apna API laga sakega

Aapne pehle jo requirement boli thi, us type ka option yahan bhi rakha ja sakta hai.

Integration Settings:

College API

API URL

API Key

Authentication Type

Test Connection

Save

Isse future mein college ka existing student-management system/API connect kiya ja sakta hai.

Recommended Technology Stack

Main is project ke liye ye stack recommend karunga:

Frontend

React.js

Backend

FastAPI (Python)

Database

PostgreSQL

Authentication

JWT

File Storage

Object Storage

AI

LLM + Embedding/Similarity

Deployment

Cloud/VPS

Complete hone mein kitna time?

Basic version

7–10 days

Login + Lost/Found + Search + Database + Admin

Good BCA version

12–18 days

- Matching
- Claims
- Notifications
- Dashboard
- Security
- Responsive UI

★ Final professional version

20–25 days

- AI matching
- Image similarity
- Advanced verification
- Analytics
- Privacy/security
- College configuration
- API integration
- Testing
- Deployment
- Documentation

Cost

Development ke liye mostly **free/open-source technologies** use kar sakte hain.

Possible expenses:

- Domain — optional
- Hosting — optional

- Database hosting — free tier/low-cost option
- AI API — depending on provider/usage
- Image storage — free tier/low-cost option

BCA project ke prototype ko **₹0 development cost** ke aas-paas bhi build kiya ja sakta hai, agar free-tier services/local setup use karein.

Project ka final version

Main ise simple **“Lost & Found Website”** nahi banaunga.

Naam kuch professional:

SmartCampus Lost & Found

AI-Powered Lost & Found Management System

Core USP:

“Report once. Match automatically. Verify securely. Recover faster.”
